

## Robert "Bob" Daniel Ivey

November 26, 1924 - August 13, 2008

Hephzibah, GA—Funeral services for Mr. Robert “Bob” Daniel Ivey, 83, of Turkey Trail, Hephzibah, Georgia, who entered into rest August 14, 2008, will be conducted Saturday afternoon at 2 o’clock in the Posey Funeral Chapel. Rev. Eric Bruton officiating. Private interment.

Mr. Ivey was a native of McKenzie, Alabama, a former resident of Jackson, SC, having made Hephzibah his home for the past 30 years. He retired after 30 years of service as an Electrician at E.I. DuPont and was a teacher at Augusta Technical College. The family would like to express appreciation to the staff of the Georgia War Veterans Home for their excellent care.

Survivors include his wife, Betty Ivey; six daughters, Joyce Fernandez, Mobile, Al, Gail Perry (Loiel), Centreville, AL, Karen Holden (Lowell), Clarks Hill, SC, Marsha Carpenter (Steve), North Augusta, SC, Barbara Landers (Billy), North Augusta, SC and Teresa Hester (Wayne), North Augusta; five sisters, Cora Bell Wells, Jay, Florida, Eva Dell McKinney, Pace Florida, Berta Ray Bowen, Florida; Zerlean Allegri, Fare Hope, AL and Myrtle Lucas, Charleston, SC; 11 grandchildren; 21 great-grandchildren.

The family will receive friends one hour prior to the service at the funeral home.

Memorials may be made to CSRA Parkinson Support Group, Inc., c/o Barbara Gagnon, 1193 New Bridge Road, Aiken SC 29805.

Posey Funeral Directors of North Augusta in charge of arrangements (803-278-1181).

“ It encompasses a range of health care practices evolved to maintain and restore health by the prevention and treatment of illness. Contemporary medicine applies health science, biomedical research, and medical technology to diagnose and treat injury and disease, typically through medication, surgery, or some other form of therapy.

The word medicine is derived from the Latin *ars medicina*, meaning the art of healing.

Though medical technology and clinical expertise are pivotal to contemporary medicine, successful face-to-face relief of actual suffering continues to require the application of ordinary human feeling and compassion, known in English as bedside manner. As science and technology developed, medicine became more reliant upon medications. Pharmacology developed from herbalism and many drugs are still derived from plants (atropine, ephedrine, warfarin, aspirin, digoxin, vinca alkaloids, taxol, hyoscine, etc). The first of these was arsphenamine / Salvarsan discovered by Paul Ehrlich in 1908 after he observed that bacteria took up toxic dyes that human cells did not. Vaccines were discovered by Edward Jenner and Louis Pasteur. The first major class of antibiotics was the sulfa drugs, derived by French chemists originally from azo dyes. This has become increasingly sophisticated; modern biotechnology allows drugs targeted towards specific physiological processes to be developed, sometimes designed for compatibility with the body to reduce side-effects. Genomics and knowledge of human genetics is having some influence on medicine, as the causative genes of most monogenic genetic disorders have now been identified, and the development of techniques in molecular biology and genetics are influencing medical technology, practice and decision-making.

AddonS^

Sahachiro Hata discovered the anti-syphilitic activity of this compound in 1908 in the laboratory of Paul Ehrlich, during a survey of hundreds of newly synthesized organic arsenical compounds. Ehrlich had theorized that by screening many compounds a drug

*could be discovered with anti-microbial activity. Ehrlich's team began their search for such a "magic bullet" among chemical derivatives of the dangerously toxic drug atoxyl. This was the first organized team effort to optimize the biological activity of a lead compound through systematic chemical modifications, the basis for nearly all modern pharmaceutical research.*

*Arsphenamine was marketed under the trade name Salvarsan in 1910. It was also called 606, because it was the 606th compound synthesized for testing Germany it was the practice to designate compounds by their development number. Another compound known commonly in Germany by its number is Parathion, which was the 605th compound to be developed in search for insecticide. It is commonly known as E605 (E stands for Entwicklungsnummer (German for "development number")). Salvarsan was the first organic anti-syphilitic, and a great improvement over the inorganic mercury compounds that had been used previously. A more soluble (but slightly less effective) arsenical compound, Neosalvarsan, (neoarsphenamine), became available in 1912. These arsenical compounds came with considerable risk of side effects, and they were supplanted as treatments for syphilis in the 1940s by penicillin.##imported-begin##ABClex##imported-end##*

“ My name is Annie and I would like to give you the family of Bob (my booger man)my heart felt symphaty.Bob called himself Boogerman to me every time he called and I would always say you don't scare me and he would laugh.I really LOVED BOB he let me buy a car from him in 2000 and helped every one he come in contact with he was truly a wonderful friend and man.My husband and I would go visit him and they would talk about gardening which they both loved to do.I will miss going to visit and getting his calls greatly.He was my friend.

SINCERLY,

“ *Barbara,*

*I remember your father as a very kind and considerate man, always smiling, and always with something good to say. Bob touched a lot of lives and made a lot of people smile. He was a good man, good neighbor, and a good father. You are in my prayers.*

*Kindest Regards,*
